IT CENTRIC DEGREES

Professional positions not only require an employee with the equivalent of a Bachelor's degree, but it requires that there exist a nexus between the beneficiary's field of study and the proffered position.

Based on feedback from clients, we've compiled a list of majors that are generally considered to be IT-centric.

Computer Science
Computer Engineering
Computer Applications
Electronics Engineering
Instrumentation Engineering

There are several majors that we've seen mixed results on, so I would consider these to be in the gray area of IT-centricity:

Electrical Engineering
Mechanical Engineering
Production Engineering
Industrial Engineering

If a candidate's degree bears no relation to the proffered position or they only have a degree from a 3 year program, it may be advisable to get a combined evaluation, encompassing the beneficiary's academic AND experiential credentials.
